

The AORN Syntegrity Documentation Content and Perioperative Nursing Data Set (PNDS)

Improve your off-the shelf EHR content with perioperative-specific content that can mitigate risks, increase quality of care and improve patient outcomes.

The AORN Syntegrity Documentation Content efficiently combines evidence- and standards-based practices with the Perioperative Nursing Data Set (PNDS) to demonstrate individualized patient-centered care. Designed and built by perioperative clinicians and based on the AORN *Guidelines for Perioperative Practice* to optimize your documentation and improve patient outcomes.

The AORN Syntegrity Documentation Content with the Perioperative Nursing Data Set (PNDS) will simplify your complex surgical environment and enhance patient outcomes by:

- ✔ Identifying the deficiencies in your documentation to represent evidence- and standards-based practices
- ✔ Supporting individualized patient-centered plans of care using the PNDS
- ✔ Detecting patient risks to implement evidence-based interventions and improve patient safety
- ✔ Recommending health record fields to enhance sharing and comparing of perioperative nursing data
- ✔ Documenting evidence-based care throughout all phases of periop care
- ✔ Providing the data to improve patient and surgical population health
- ✔ Supporting clinical practice to enhance the decision making process

Give your surgical team the tools they need to contribute to improved patient outcomes and increase facility profits by:

- Capturing data to make better decisions
- Enhancing patient safety
- Lowering costs
- Addressing evidence-based standards
- Meeting regulatory standards
- Better measuring their value
